Subject: Soresto dog collar complaint

12 yr old border collie/terrier mix

Symptoms: vomiting, gastrointestinal issues, stopped eating, eventually neurological issues which included paralysis starting with his back legs then all four legs and eventually death all within an 8 month period. He was a healthy 12 yr. old with full of life. He had ABSOLUTELY no issues until I put this collar on him and before I put two and two together it was too late. I rescued him at the age of two and now I feel to blame for his death. This is ethically and morally wrong

what these pesticides are doing to our pets and what the long terms effects are to our own health. This product needs to be addressed ASAP!!

Pesticide: Soresto (imidacloprid and flumethrin)
